

OnSite [INFO]

The Ideal Solution for Field Interviews on the Construction Site

- Saves time for agencies and prime contractors monitoring jobsite compliance
- Increases efficiency of interview process and eliminates manual data verification
- Versatile mobile application with tablet accessibility

Key Features & Benefits

Streamlines Processes

User-friendly interface allows users to efficiently conduct and store interviews

Convenient Mobile App

Mobile app that can be used on any tablet device with an iOS or Android operating system

Versatile Template Usage

Customized interview templates can be uploaded to meet unique requirements

Automatic Data Verification

System automatically cross-checks pre-mapped interview data with certified payroll report data

Reporting Capabilities

Users can generate reports based on captured interview data

Electronic & Cloud Based

Cloud-based application with ability to conduct interviews offline

Time-Saving, Convenient Features

Versatile app that allows picture attachments, fingertip signatures, and quick data entry

OnSite is a tablet-based application that allows users to create, conduct, verify, and store custom site interviews electronically. It is an ideal tool for government agencies and prime contractors to ensure all contractors are remaining compliant on the jobsite, without the use of paper forms or manual verifications.

As an app-based solution (available on both iOS and android platforms), users can upload interview results immediately, or conduct the interview offline and upload when internet connectivity is available.

OnSite integrates with LCPtracker to automatically cross-check interview results with the data that contractors submit on their certified payroll reports (CPRs). This brings any discrepancies to the surface, from underpayments to labor law violations. Plus, with the ability to upload any customized interview template, users can build and conduct interviews according to their unique requirements, further streamlining the field compliance process.
