

Workforce Manager [INFO]

Building Careers to Build Better Communities

- Allows organizations to accomplish their workforce goals
- Measures the ROI on workforce programs and support services
- Helps provide employment opportunities to the most disadvantaged citizens

Key Features

- Track workers throughout their career
- Collaboration and sharing between organizations
- Dynamic data models that keep up with industry standards
- Target specific communities or demographics
- Identify programs and career paths for workers

LCPtracker's Workforce Manager application is a cloud-based solution that provides the ability to track and monitor construction workers throughout the life cycle of their careers, from the pre-apprentice training programs, to the journeymen level and beyond. This data can then be shared between various entities.

Workforce Manager integrates with LCPtracker's data warehouse, Infintum, thereby creating a virtual organization that encourages collaboration between workforce programs and government agencies.

Workforce programs will be able to track the ROI of their initiatives. Likewise, government agencies that fund public works projects can then funnel this data into their own initiatives and help accomplish their workforce goals. Together, organizations will be able to target our most vulnerable, disadvantaged citizens and illuminate employment opportunities to help lift them out of poverty.
